

ESCALATING ANTI-IMMIGRANT MOBILIZATION AND FOREIGN-NATIONAL SECURITY RISK IN SOUTH AFRICA

NGO Security Risk Management: Intelligence Assessment

DOMAIN	PRODUCER	FRAMEWORK	DATE
NGO Security Risk Management	M. Nuri Shakoor / MNS Consulting	QAP™ v2.0 / OSPREY	08 May 2026
CONFIDENCE	CLASSIFICATION	THREAT LEVEL	SCOPE
Moderate	Open Source / Partner-Facing	ELEVATED	South Africa: Urban Economic Hubs

ANALYTIC SCOPE BOUNDARY

Time range: 24 April to 08 May 2026 (current lookahead); historical baseline 1994 to 02 February 2026 via XenoWatch. Forward-looking horizon: 30 days. Source type limits: open-source only; no classified streams, no SAPS non-public datasets, no hospital admissions, shelter records, or consular case files. Excluded streams: unauthenticated social media, partisan aggregators, AI-generated summaries. Confidence note: Source register is strong for protests, diplomatic reactions, and historical baseline. Current incident granularity is limited by absence of a consolidated verified 14-day public incident dataset.

FORECAST HORIZON	SOURCE REGISTER	HISTORICAL BASELINE	SOURCE STREAMS	KEY GAP
30 Days	14+ Sources	1994–2026	7	14-Day Incident Ledger

Produced under the Quanta Analytica Process™. All claims traced to open-source evidence or labelled as analyst inference. No fabricated sources, quotes, or data. Report ID: QAP-SAF-XENO-2026-0508

Production Control Gate

FIELD	CONFIGURATION	ANALYTIC CONTROL
Primary Domain	NGO Security Risk Management	Duty of care, field access, protection, consular coordination.
Supporting Domains	Conflict Systems Analysis; Behavioral Risk Diagnostics; Information Integrity Analysis	Escalation pathways, identity-based mobilization, rumor and narrative amplification.
Decision Need	Determine whether acute anti-immigrant activity is localized or transitioning toward broader multi-region violence.	Defines thresholds for movement restriction, field suspension, protection coordination, and repatriation support.
Evidence Discipline	Source register, WSI audit, RAPITIS, C-D-F, ACH, KAC, scenario modeling, I&W, confidence audit.	Structured reasoning precedes narrative judgment.
Key Caveat	No consolidated verified public incident dataset for the past 14 days was identified.	XenoWatch is used for historical systems context only.

Bottom Line Up Front

01	[ASSESS]	Current conditions indicate elevated localized risk, not yet a confirmed systemic multi-region violence surge. Recent reporting shows protests, foreign-national fear, diplomatic warnings, and repatriation requests across multiple streams. However, available open sources do not yet provide a verified, consolidated incident ledger showing sustained synchronized attacks across provinces. [S1][S2][S3]
02	[ASSESS]	The current unrest is best treated as an acute symptom of an established systemic pattern. XenoWatch historical data and migration-research reporting show xenophobic discrimination as recurrent and spatially patterned in South Africa through 02 February 2026. This does not verify the current 14-day incident picture, but it strengthens the structural diagnosis that the present episode sits inside a longer governance, service-delivery, labor-market, identity, and vigilante-enforcement system. [S7][S8]
03	[FACT]	Diplomatic concern has crossed an operational threshold for foreign missions. Kenya, Malawi, Lesotho, Zimbabwe, Ghana, and Nigeria-linked reporting reflects advisories, diplomatic engagement, and voluntary repatriation pressure. Nigerian authorities reported at least 130 citizens seeking repatriation amid the renewed protests. [S1][S2][S12]
04	[ASSESS]	The most actionable near-term risk is coercive civic gatekeeping. The priority operational risk is not only mob violence. It includes clinic obstruction, school and service-access disruption, document checks, business shutdown pressure, and crowd formation near migrant-linked facilities. Court and government records show that service-denial behavior has been a documented pathway. [S4][S5][S6]
05	[ASSESS]	NGOs and missions should move to heightened protective coordination now, with Orange and Red triggers tied to verified mobilization and access disruption. Movement restrictions should be activated by verified threats, organized patrols, business shutdown demands, facility obstruction, credible protest calls near operating areas, or police warnings. Active repatriation support should be reserved for multi-site violence, direct nationality targeting, shelter saturation, consular emergency requests, or police inability to secure movement. [S1][S2][S11]

Key Intelligence Questions

QUESTION ID	INTELLIGENCE QUESTION	LINKS TO
KIQ-1	What verified incidents of harassment, looting, intimidation, service denial, or forced closure have occurred in the current 14-day window, and where?	KJ-1; Evidence Gap G1; I&W
KIQ-2	Are anti-immigration groups converting economic grievance into coordinated mobilization beyond isolated protests?	KJ-2; ACH; Behavioral Section
KIQ-3	Is state response reducing violence or creating perceived impunity through delayed, reactive, or ambiguous enforcement?	KJ-3; KAC; Risk Matrix
KIQ-4	Which behavioral indicators would show movement from rhetoric to physical mobilization?	KJ-4; I&W; Escalation Ladder
KIQ-5	What thresholds should trigger movement restrictions, field suspension, shelter coordination, or repatriation support?	KJ-5; Decision Thresholds
KIQ-6	How should historical xenophobic-discrimination data be integrated without overstating current incident verification?	KJ-1; Five-Layer Map; WSI Caveat

Situation Snapshot

WHO	Anti-immigration groups including March and March and Operation Dudula, migrant communities, South African authorities, foreign missions, civil society groups, local businesses, service providers, and law enforcement. [S3][S5]
WHAT	Anti-immigration protests, reported intimidation and violence against foreign nationals, clinic-access obstruction history, diplomatic advisories, and voluntary repatriation requests. [S1][S2][S4]
WHERE	Priority concern centers on Johannesburg, Pretoria, KwaZulu-Natal, Eastern Cape, Durban-linked reporting, and urban economic hubs where migrant-owned businesses and public services intersect. [S1][S3][S14]
WHEN	Current lookback covers approximately 24 April to 08 May 2026. Historical systems context extends through XenoWatch data available to 02 February 2026. [S7][S13]
WHY	Foreign nationals and NGOs face exposure through movement, commerce, healthcare access, school access, documentation checks, and protest-adjacent violence. [S4][S6]
HOW	Risk manifests through grievance mobilization, social proof, rumor amplification, vigilantism, service denial, intimidation, business closure pressure, and underreported protection needs. [S1][S6][S8]

Key Judgments

KJ-1 MODERATE	[ASSESS] The current escalation remains best characterized as multi-localized pressure rather than a confirmed systemic multi-region violence surge. Diplomatic warnings and protest reporting show spread, but absence of a verified public 14-day incident ledger prevents a higher-confidence systemic-violence judgment. [S1][S2][S3] Maps to: KIQ-1, KIQ-6 Falsifier: Verified multi-city attacks over 72 hours with deaths, displacement, shelter saturation, or police inability to secure movement.
KJ-2 MODERATE	[ASSESS] Organized mobilization is a significant accelerant, but evidence is insufficient to show centralized national command of violence. March and March and Operation Dudula are visible in protest and vigilante-service-denial pathways, while current reporting does not prove a single command structure. [S3][S4][S5] Maps to: KIQ-2 Falsifier: Verified logistics, target lists, transport coordination, or synchronized calls across multiple cities.
KJ-3 MODERATE	[ASSESS] State response is visible but behaviorally mixed. South African officials have condemned xenophobia and called for peaceful protest, while court and civil society reporting indicates enforcement gaps around clinic obstruction and vigilante screening. [S4][S5][S6][S11] Maps to: KIQ-3 Falsifier: Rapid arrests, consistent facility protection, and no repeat obstruction in affected areas.
KJ-4 MODERATE	[ASSESS] Behavioral escalation indicators center on movement from grievance rhetoric to logistics: patrols, ID checks, clinic or school presence, business shutdown demands, crowd formation, and viral claims that convert into offline gatherings. [S1][S3][S6] Maps to: KIQ-4 Falsifier: No organized presence, no service obstruction, and de-escalatory community liaison over 7 to 10 days.
KJ-5 MODERATE	[ASSESS] Repatriation support should not be triggered by rhetoric alone, but by verified multi-site violence, direct nationality targeting, shelter saturation, consular emergency demand, or police inability to secure safe movement. [S1][S2][S12] Maps to: KIQ-5 Falsifier: N/A. Decision value: prevents premature evacuation while preserving duty-of-care escalation thresholds.
WATCH LOW-MOD	[CAVEAT] Information-triggered flashpoint risk is plausible. Viral claims, disputed videos, and emotionally salient allegations could rapidly mobilize crowds if tied to alleged crime, service access, or foreign-national business competition. [S1][S11] Maps to: KIQ-4 Falsifier: Specific online claim plus verified offline gathering near named target.

Evidence Summary and Epistemic Audit

WHAT WE KNOW	WHAT WE ASSESS	WHAT WE DO NOT KNOW
Anti-immigration protests and warnings are visible across credible reporting streams. [S1][S3] At least 130 Nigerians sought repatriation amid the renewed tensions. [S2][S12] South Africa has over 3 million immigrants (5.1% of population) per Stats SA. [S9] Official unemployment stood at 31.4% in Q4 2025. [S10] Courts and government statements document prior obstruction of foreign nationals from public services. [S4][S5]	The acute protest cycle is nested in a systemic xenophobic-discrimination pattern rather than a one-off event. Service denial, intimidation, and business closure pressure are more likely than a uniform national violence wave in the immediate term. Economic scarcity narratives act as mobilizers but do not prove migrant causation. State condemnation reduces some risk, but inconsistent local enforcement can create a perceived permission structure.	Verified incident count by location, date, type, and victim nationality for the past 14 days. Whether current group coordination is logistical, rhetorical, or command-directed. Facility-level compliance with clinic and school access protections. Consular case trends beyond public repatriation and advisory reporting.

KEY DRIVERS

FACT	High unemployment, public-service pressure, migration salience, and urban economic stress create a high-friction environment. [S9][S10]
INFERENCE	Mobilizing actors convert diffuse economic grievance into targetable foreign-national narratives, especially where state service delivery is distrusted.
INFERENCE	Historical recurrence documented by XenoWatch strengthens the systemic baseline but does not fill the current real-time incident-data gap. [S7][S8]

BINDING CONSTRAINTS

CONSTRAINT	TYPE	DECISION IMPACT
Current incident granularity is incomplete.	Data	Confidence cannot exceed Moderate for current incident spread.
Protection depends on local police implementation, not only national messaging.	Institutional	Field access must be assessed site by site.
Social media can amplify quickly but is not evidentiary unless verified.	Information	Rumor-triage and ground verification are required before action.
Foreign-national communities may underreport due to fear or documentation concerns.	Protection	Silent displacement and unmet needs may exceed public reporting.

WSI SOURCE INDEPENDENCE NOTE

Load-bearing claims draw from wire reporting, official South African sources, court/parliamentary records, local journalism, official statistics, and specialized monitoring datasets. Current incident spread remains caveated because no consolidated SAPS, municipal, hospital, shelter, or foreign mission incident dataset was identified.

Structured Analysis

Techniques applied: Five-Layer Map | KAC | ACH | I&W | Scenario Modeling | Risk Matrix

FIVE-LAYER STRATEGIC COGNITION MAP

LAYER	QAP FUNCTION	ASSESSMENT	DECISION RELEVANCE
L1 Foundations	What exists?	High unemployment, migrant population concentration, historical xenophobic-discrimination patterns, urban service pressure, and visible anti-immigration groups form the structural field. [S7][S9][S10]	Do not treat the current unrest as an isolated protest cycle.
L2 Mechanisms	What causes change?	Economic grievance is converted into foreign-national targeting through scarcity narratives, citizen-first frames, vigilante inspection, service denial, and crowd mobilization. [S3][S4][S5]	Monitor conversion from rhetoric to logistics.
L3 Dynamics	How does the system behave over time?	Recurring flashpoints can generate copycat action, business closure fear, diplomatic pressure, and increased foreign-national avoidance. XenoWatch data supports recurrence as a systemic feature rather than an anomaly. [S7][S8]	Build monitoring around recurrence loops, not only today's incidents.
L4 Leverage	Where can intervention work?	Leverage sits at verified incident logging, police liaison, clinic and school access checks, consular coordination, rumor verification, and shelter capacity mapping.	Action thresholds become operational rather than rhetorical.
L5 Paradigms	What belief system defines behavior?	Competing paradigms are visible: citizens-first resource protection versus rights-based constitutional service access; vigilante order versus lawful state enforcement; migrants as competitors versus residents requiring protection.	De-escalation requires shifting legitimacy frames, not just policing events.

KEY ASSUMPTIONS CHECK

ID	ASSUMPTION	WHY IT MATTERS	RISK IF WRONG	STATUS
----	------------	----------------	---------------	--------

A1	Current incidents are clustered, not systemic.	Sets posture below emergency repatriation threshold.	Underreaction to broader violence.	Active
A2	Anti-immigration groups are not centrally directing national violence.	Determines focus on local triggers versus national command.	Missed coordinated escalation.	Unverified
A3	Official condemnation can reduce risk when paired with enforcement.	Shapes reliance on police and municipal authorities.	False reassurance if enforcement fails.	Mixed
A4	Foreign nationals can report incidents safely.	Affects incident visibility and protection estimates.	Undercounting harm and displacement.	Weak
A5	XenoWatch historical data is valid for system baseline, not current event verification.	Prevents overclaiming while preserving systems insight.	Either overfitting history or losing structural context.	Confirmed Use Rule

ANALYSIS OF COMPETING HYPOTHESES

HYPOTHESIS	EVIDENCE FOR	EVIDENCE AGAINST / LIMITS	DIAGNOSTICITY	VERDICT
H1 Localized Harassment	Current reports show protests and intimidation pressure without a verified national incident ledger. [S1][S3]	Diplomatic warnings suggest perceived broader risk. [S1]	4	<i>Least disconfirmed baseline.</i>
H2 Coordinated Vigilante Expansion	Operation Dudula and March and March show mobilizing structures and service-denial precedent. [S3][S5]	No public proof of centralized national command in the current cycle.	4	<i>Secondary accelerant.</i>
H3 State Weakness / Permission Structure	Court and GroundUp reporting indicate enforcement gaps around clinic access. [S5][S6]	Government has publicly condemned xenophobia and service obstruction. [S4][S14]	4	<i>Material risk condition.</i>
H4 Systemic Violence Surge	Historical recurrence and multi-state concern increase consequence risk. [S7][S8]	No verified current multi-province synchronized violence dataset identified.	5	<i>Watch, not baseline.</i>

H5 Information-Triggered Flashpoint	Recent reporting references viral-video and narrative-amplification concerns. [S1][S11]	Social media authenticity remains weak unless independently verified.	4	<i>Overlay risk.</i>
--	---	---	----------	----------------------

ACH RESULT

The least-disconfirmed current hypothesis is H1 plus H3, with H2 as a significant accelerant and H5 as an overlay risk. H4 is not the baseline but would upgrade rapidly if verified multi-site violence, deaths, displacement, or police inability to secure movement are confirmed.

SCENARIO MODELING: 30-DAY OUTLOOK

BEST / CONTAINED <i>Contained Localized Tension</i>	Protests continue but police and municipal authorities prevent service obstruction, looting, and repeat intimidation. Field access remains possible with localized restrictions. Probability: 25-30% Confidence: Moderate
BASE / EPISODIC <i>Episodic Local Escalation</i>	Harassment, business closure fear, clinic or school friction, and crowd intimidation recur in exposed urban hubs. No confirmed sustained national violence wave emerges. Probability: 45-55% Confidence: Moderate
WORST / SURGE <i>Coordinated Multi-Hub Pressure</i>	Repeated patrols, shutdown demands, service obstruction, viral allegations, and protest-linked violence emerge across multiple cities, forcing field suspension and consular escalation. Probability: 20-25% Confidence: Low to Moderate

Applied Behavioral Analysis

Behavioral analytic guardrail:
This section does not speculate about individual psychology, pathology, ethnicity, or intent. It analyzes observable behaviors, incentives, identity frames, social proof, risk perception, service-denial mechanisms, and escalation thresholds.

BEHAVIORAL RISK DRIVERS

01	Scarcity-to-scapegoating conversion. High unemployment and service pressure can become behaviorally actionable when mobilizers frame foreign nationals as the reason citizens are excluded from jobs, clinics, schools, or business opportunity. [S9][S10] Warning value: rhetoric becomes risk when it names a place, time, group, or target category.
02	Moral exclusion and service-denial normalization. Clinic and social-service obstruction shows a pathway where foreign nationals are reframed as outside the normal rights-bearing community. Court and government records make this pathway material, not speculative. [S4][S5][S6] Warning value: one verified denial at a clinic or school should trigger Orange posture.
03	Vigilante legitimacy framing. Groups that present themselves as community protectors can convert distrust in state capacity into public acceptance of unlawful inspections, ID checks, or exclusionary gatekeeping. [S3][S5] Warning value: monitor uniforms, patrols, inspection notices, and claims of local mandate.
04	Social proof and copycat mobilization. Visible marches, shop closures, and historical recurrence can lower perceived barriers to imitation. Crowd behavior may spread through perceived community approval before formal organization is visible. [S3][S7][S8] Warning value: track repeat incidents within seven days of high-visibility protests.
05	Rumor-to-mobility pathway. Unverified videos or allegations can function as mobilization cues even when factual authenticity is contested. Under WSI rules, social media is a lead for verification, not a fact stream. [S1][S11] Warning value: a viral claim plus offline gathering equals a Red trigger.

BEHAVIORAL ESCALATION LADDER

STAG E	BEHAVIORAL PATTERN	OBSERVABLE INDICATOR	DECISION TRIGGER
0	Background tension	Anti-immigrant rhetoric without mobilization	Routine monitoring

1	Harassment and service friction	Verbal threats, ID demands, access pressure	YELLOW
2	Organized vigilante presence	Patrols, inspections, gathering calls near facilities	ORANGE
3	Economic coercion	Forced closures, looting threats, intimidation	RED
4	Multi-site violence	Multiple neighborhoods affected over 72 hours	RED to BLACK
5	Systemic surge	Multi-province violence, displacement, consular emergency posture	BLACK

Strategic Implications, Risk and Decision Thresholds

RISK SCORING MATRIX

RISK	LIKELIHOOD (1-5)	IMPACT (1-5)	SCORE	MITIGANT	TRIGGER
Localized harassment	4	3	12	Confidential reporting, liaison, staff check-ins	Verified harassment report
Service denial at clinics or schools	4	4	16	Facility access checks, legal referral pathway, police liaison	One verified denial or obstruction
Business looting or forced closure	3	4	12	Route restrictions, trader network monitoring	Shutdown demand or crowd near shops
Coordinated vigilante mobilization	3	4	12	Monitor logistics, inspections, patrols	Specific time/place mobilization call
Multi-site violence	3	5	15	Shelter plan, field suspension, mission coordination	Violence in two or more hubs
Information-triggered flashpoint	3	4	12	Digital verification and ground-truth channel	Viral claim plus offline gathering

DECISION THRESHOLDS

GREEN MONITOR	- No verified threats in operating area. - No active gathering call near field sites. - No service obstruction reported.
YELLOW / ORANGE HEIGHTENED PROTECTION POSTURE	- Credible rhetoric, isolated harassment, patrols, or facility pressure. - Restrict movement for nonessential travel in affected areas. - Increase police, municipal, and consular liaison.
RED / BLACK EMERGENCY COORDINATION POSTURE	- Violence, forced closures, roadblocks, direct targeting, shelter saturation, or police inability to secure movement. - Suspend exposed field activity. - Coordinate consular support and voluntary repatriation assistance.

RECOMMENDED ACTION TIMELINE

0-72 HOURS IMMEDIATE	• Establish a daily verification cell: police liaison, facility checks, trusted community contacts, consular updates, and rumor triage. • Map NGO staff routes, migrant-linked service points, shelters, and business corridors against known protest locations.
3-30 DAYS NEAR-TERM	• Build a shared incident log with atomic fields: date, location, event type, target, source stream, verification status, and confidence. • Activate Orange posture for any verified patrol, service obstruction, or credible protest call near field activity.
30-180 DAYS MEDIUM-TERM	• Develop a systemic monitoring baseline using XenoWatch historical patterns, current incident coding, and service-access indicators. • Integrate de-escalatory community liaison and lawful service-access messaging into access planning.

Confidence and Uncertainties

OVERALL CONFIDENCE ASSESSMENT	MODERATE
• Source base is strong for public protests, diplomatic reactions, government and court positions, labor-market context, and historical systems baseline. • Confidence is constrained by the lack of a consolidated, verified current incident dataset from SAPS, municipalities, hospitals, shelters, or foreign missions. • Multiple credible wire services confirm protest spread and diplomatic concern, providing a robust multi-stream foundation for the structural assessment. • Historical systemic context (XenoWatch through February 2026) supports diagnosis but cannot verify the current 14-day incident picture.	

THREE UNCERTAINTIES THAT COULD FLIP THE ASSESSMENT

FLIP RISK 01	If verified incidents show synchronized attacks across multiple provinces, the baseline shifts from localized pressure to systemic violence surge.
FLIP RISK 02	If court orders and official condemnation produce visible enforcement and no repeat obstruction, service-denial risk declines.
FLIP RISK 03	If viral claims are independently debunked and do not generate offline gatherings, information-triggered flashpoint risk falls.

ASSUMPTION FAILURE DRILL

ASSUMPTION	FAILURE SIGNAL	CONSEQUENCE
Current incidents are clustered, not systemic (A1).	Verified multi-city attacks within 72 hours; shelter saturation; police unable to secure movement.	Immediate shift to emergency repatriation posture; field activity suspended across exposure zones.
Anti-immigration groups are not centrally directing national violence (A2).	Intercepted coordination, synchronized calls across three or more cities, logistics or target-list evidence.	Threat model expands from opportunistic mobilization to directed campaign; protection posture and intelligence collection requirements escalate.

Source Register and WSI Audit

#	SOURCE / TYPE	DATE	BAND	C-D-F / USE	URL / LOCATOR	ATOMIC CLAIM
S1	Reuters / Wire reporting	07 May 2026	Green	C5 D4 F4	reuters.com	African countries warned citizens about xenophobic attacks; protests and violence linked to anti-illegal immigration mobilization.
S2	Associated Press / Wire reporting	05 May 2026	Green	C5 D5 F5	apnews.com	130 Nigerians sought voluntary repatriation; Nigerian authorities raised concern amid anti-immigration protests.
S3	Associated Press / Wire reporting	29 Apr 2026	Green	C4 D4 F5	apnews.com	Johannesburg protest organized by March and March; Operation Dudula present; shops closed over looting fears.
S4	South African Government / Primary	05 Jul 2025	Green	C5 D5 F5	gov.za	Government said blocking foreign nationals from healthcare violates constitutional access rights; related incidents noted.
S5	Parliament of South Africa / Primary	05 Nov 2025	Green	C5 D5 F5	parliament.gov.za	South Gauteng High Court interdicted Operation Dudula from disrupting foreign nationals from social services.
S6	GroundUp / Local journalism	27 Mar 2026	Green	C4 D5 F4	groundup.org.za	Court warned government to comply with order to protect clinic access; vigilante blockades and screening concerns continued.

S7	XenoWatch / Specialized monitoring	Accessed 08 May 2026	Green	C4 D4 F4	xenowatch.ac.za	Dashboard covers xenophobic-discrimination incidents in South Africa from 1994 through 02 February 2026.
S8	ACMS / Migration.org.za / Research	17 Nov 2025	Green	C4 D4 F4	migration.org.za	XenoWatch report describes xenophobic discrimination as persistent and widespread in urban and economically strained areas.
S9	Statistics South Africa / Official	25 Feb 2026	Green	C5 D3 F5	statssa.gov.za	South Africa has over 3 million immigrants, accounting for 5.1% of population.
S10	Statistics South Africa / Official labor	Feb 2026	Green	C5 D3 F5	statssa.gov.za	Official unemployment rate was 31.4% in Q4 2025; youth unemployment remained high.
S11	EWN / Local journalism	06 May 2026	Green	C4 D4 F4	ewn.co.za	Ramaphosa and Mozambique's Chapo discussed tensions; presidency said protests must be peaceful and law enforcement should prevent violence.
S12	Reuters / Wire reporting	04 May 2026	Green	C5 D5 F5	reuters.com	At least 130 Nigerians sought repatriation after protests; Nigeria summoned South African representative.
S13	Reuters / Wire reporting	24 Apr 2026	Green	C4 D4 F5	reuters.com	South Africa promised crackdown after Ghana complaints and protests over attacks against foreign nationals.

S1 4	EWN / Local journalism	28 Apr 2026	Green	C4 D4 F4	ewn.co.za	President Ramaphosa said illegal immigration concerns should not give rise to hatred and xenophobia.
---------	------------------------	-------------	-------	----------	-----------	--

WSI AUDIT RESULT

GREEN SOURCES	14 of 14 in current register, with caveat that quality does not equal completeness.
INDEPENDENT STREAMS	Wire journalism, local journalism, government primary statements, parliamentary/court-linked records, official statistics, specialized monitoring data, migration research.
EXCLUDED STREAMS	Unauthenticated social posts, screenshots, partisan aggregators, Wikipedia, and AI-generated summaries.
DOWNGRADED CLAIMS	Exact current incident counts, claims of central command, viral-video claims, and real-time facility-level access status.
PRIMARY GAP	No consolidated verified 14-day incident dataset from SAPS, municipalities, hospitals, shelters, or foreign missions.

BAND KEY: Green = high credibility, multi-source corroborated; Amber = single credible source or partial corroboration; Red = contested, unverified, or single low-reliability source.

INDEPENDENCE TEST: Wire services (Reuters, AP) citing separate field correspondents were treated as independent streams. South African government, parliamentary, and court sources were treated as one institutional stream. EWN and GroundUp were treated as independent local journalism streams with separate editorial oversight. No single upstream source was counted across multiple outlets as independent corroboration without verification.

Annex A: Indicators and Warnings

ID	INDICATOR	WHY IT MATTERS	THRESHOLD	ACTION	CADENCE
EWI-1	Verified harassment in operating area	Stage 1 escalation	One verified incident	Move to Yellow; check-in cadence for all field staff.	Daily
EWI-2	Call to gather near clinics, schools, shelters, markets, or municipal offices	Rhetoric becomes logistics	Specific time/place verified by two streams	Move to Orange; assess facility access for next 48 hours.	Daily
EWI-3	Clinic or school access obstruction	Service-denial pathway	One verified denial	Move to Orange; activate legal referral and police liaison.	Daily in hotspots
EWI-4	Patrols, uniforms, or ID checks	Vigilante enforcement	Observed presence	Move to Orange; document, report, and brief staff.	Daily
EWI-5	Business shutdown demand	Economic coercion	Credible written or repeated verbal demand	Move to Red; restrict nonessential movement in area.	Immediate
EWI-6	Violence or property damage at migrant-linked businesses	High-impact flashpoint	One verified incident	Move to Red; field suspension for exposed areas.	Immediate
EWI-7	Viral allegation naming nationality group plus offline gathering	Information-to-mobility conversion	Both conditions met	Move to Red; ground-truth verification before movement decisions.	Same day
EWI-8	Consular advisory escalation	Mission threshold	Formal warning or emergency notice	Move to Red; initiate consular coordination call.	Daily
EWI-9	Shelter occupancy spike	Displacement signal	80% capacity or rapid 48-hour rise	Move to Red/Black; activate shelter coordination protocol.	Daily
EWI-10	Multi-neighborhood incidents in 72 hours	Systemic shift signal	Three or more verified sites	Move to Black; full field suspension and repatriation coordination.	Continuous

Annex B: Priority Intelligence Gaps and Collection Plan

B.1 PRIORITY INTELLIGENCE GAPS

GAP ID	INTELLIGENCE QUESTION	WHY IT MATTERS	COLLECTION RECOMMENDATION	PRIORITY
G1	Verified incident count and locations for current 14-day window.	Determines localized versus systemic pattern.	SAPS, hospitals, shelters, NGOs, media coding, consular liaison.	Critical
G2	Service-denial pattern by clinic and school.	Protects health and education access.	Facility manager call-down and legal-aid partners.	Critical
G3	Anti-immigration group coordination and logistics.	Distinguishes protest from organized expansion.	Open-source monitoring, transport observations, community liaison.	High
G4	Police response posture and local implementation.	Determines whether field access can rely on state protection.	Station-level liaison, deployment checks, arrest updates.	Critical
G5	Foreign mission repatriation and advisory trends.	Sets Red and Black thresholds.	Consular coordination calls and advisory tracking.	High
G6	Shelter capacity and safe movement corridors.	Supports emergency protection and voluntary repatriation.	Shelter network, transport partners, protection cluster coordination.	High

B.2 ACTION THRESHOLDS

GREEN // MONITOR	No verified threats in operating area. No active gathering calls near field sites. Routine monitoring continues. No protective protocol activation required. • Maintain daily verification cadence. • No operational posture changes required.
AMBER // ACT NOW	Elevated risk: credible rhetoric, isolated harassment, patrols, or facility pressure. • Restrict nonessential movement in exposed areas. • Increase police, municipal, and consular liaison frequency. • Activate EWI-1 through EWI-4 monitoring.
RED // EMERGENCY	Critical threshold: violence, forced closures, roadblocks, direct nationality targeting, shelter saturation, or police inability to secure movement. • Suspend exposed field activity immediately.

- Initiate consular emergency coordination.
- Activate voluntary repatriation support pathway.

QUANTA ANALYTICA | MNS CONSULTING

QAP-SAF-XENO-2026-0508 | Open Source / Partner-Facing

Produced under the Quanta Analytica Process™. This report is evidence-caveated and source-bounded. It is intended for lawful civilian protection, humanitarian access planning, diplomatic coordination, and risk reduction. It does not provide targeting guidance or operational advice that would facilitate harm.
